Introduction

The **Thesis Management System** is a web-based system designed to simplify the thesis workflow for students and faculty members. This system allows students to form teams, search for supervisors and manage their thesis-related tasks in one place. Faculty members can register as supervisors or co-supervisors, review thesis documents, give feedback and evaluate thesis progress and final submissions.

The platform helps maintain clear communication between students and faculty, supports scheduling of meetings, tracks progress and ensures structured thesis handling from start to finish. With role-based dashboards and database integration using **PHP, phpMyAdmin and HTML/CSS**, the system offers a user-friendly experience for all users involved in the thesis.

Project Features

The features for this project are given below:

1. Self Registration in a Team

A student can create or join a team by entering their information and selecting teammates.

2. Showing Supervisor and Co-supervisor List

Displays a list of available supervisors and co-supervisors with their details and interests.

3. Requesting Faculties to Be Co-supervisor/Supervisor via Meeting

Students can send a formal meeting request to a faculty to ask them to become their supervisor or co-supervisor.

4. Team Search for Single Student

A student without a team can search for existing teams that match their interest and CGPA.

5. Progress Report

Students can submit regular updates about their thesis progress, which supervisors can view.

6. Schedule with Own Faculty

Shows scheduled meetings or deadlines between the student's team and their assigned faculty.

7. Submit Thesis

Students can upload and submit their final thesis documents for review and grading.

8. Apply as Co-supervisor/Supervisor

Faculty members can apply to act as a supervisor or co-supervisor by submitting their profile and interest area.

9. Giving Feedback

Faculty or panel members can give written feedback to students after meetings or submissions.

10. Grade Evaluation

Supervisors and panelists can give marks based on performance, report quality, and presentation.

11. Thesis Jury Panel

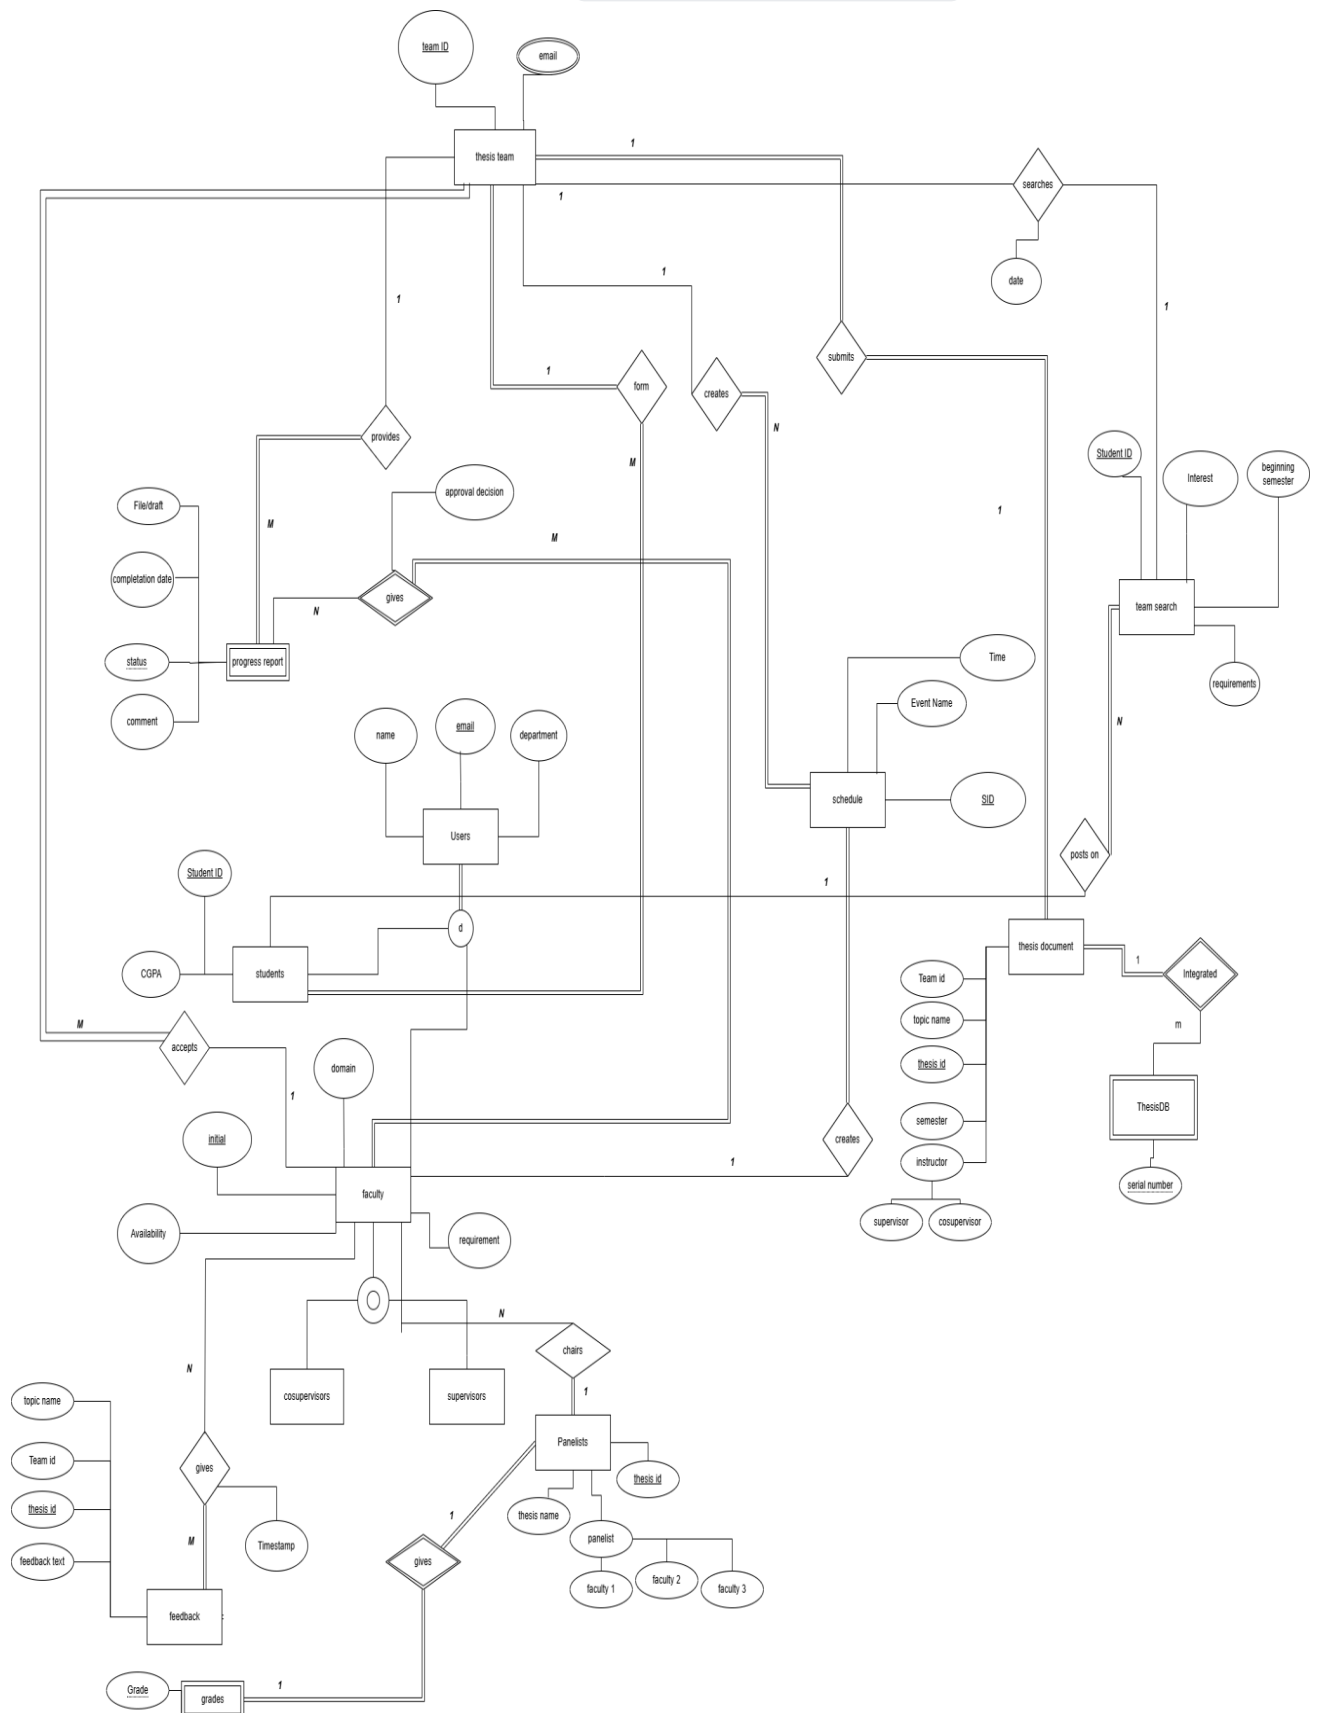

A panel of faculty assigned to review the thesis and evaluate the final defense.

12. Thesis Database

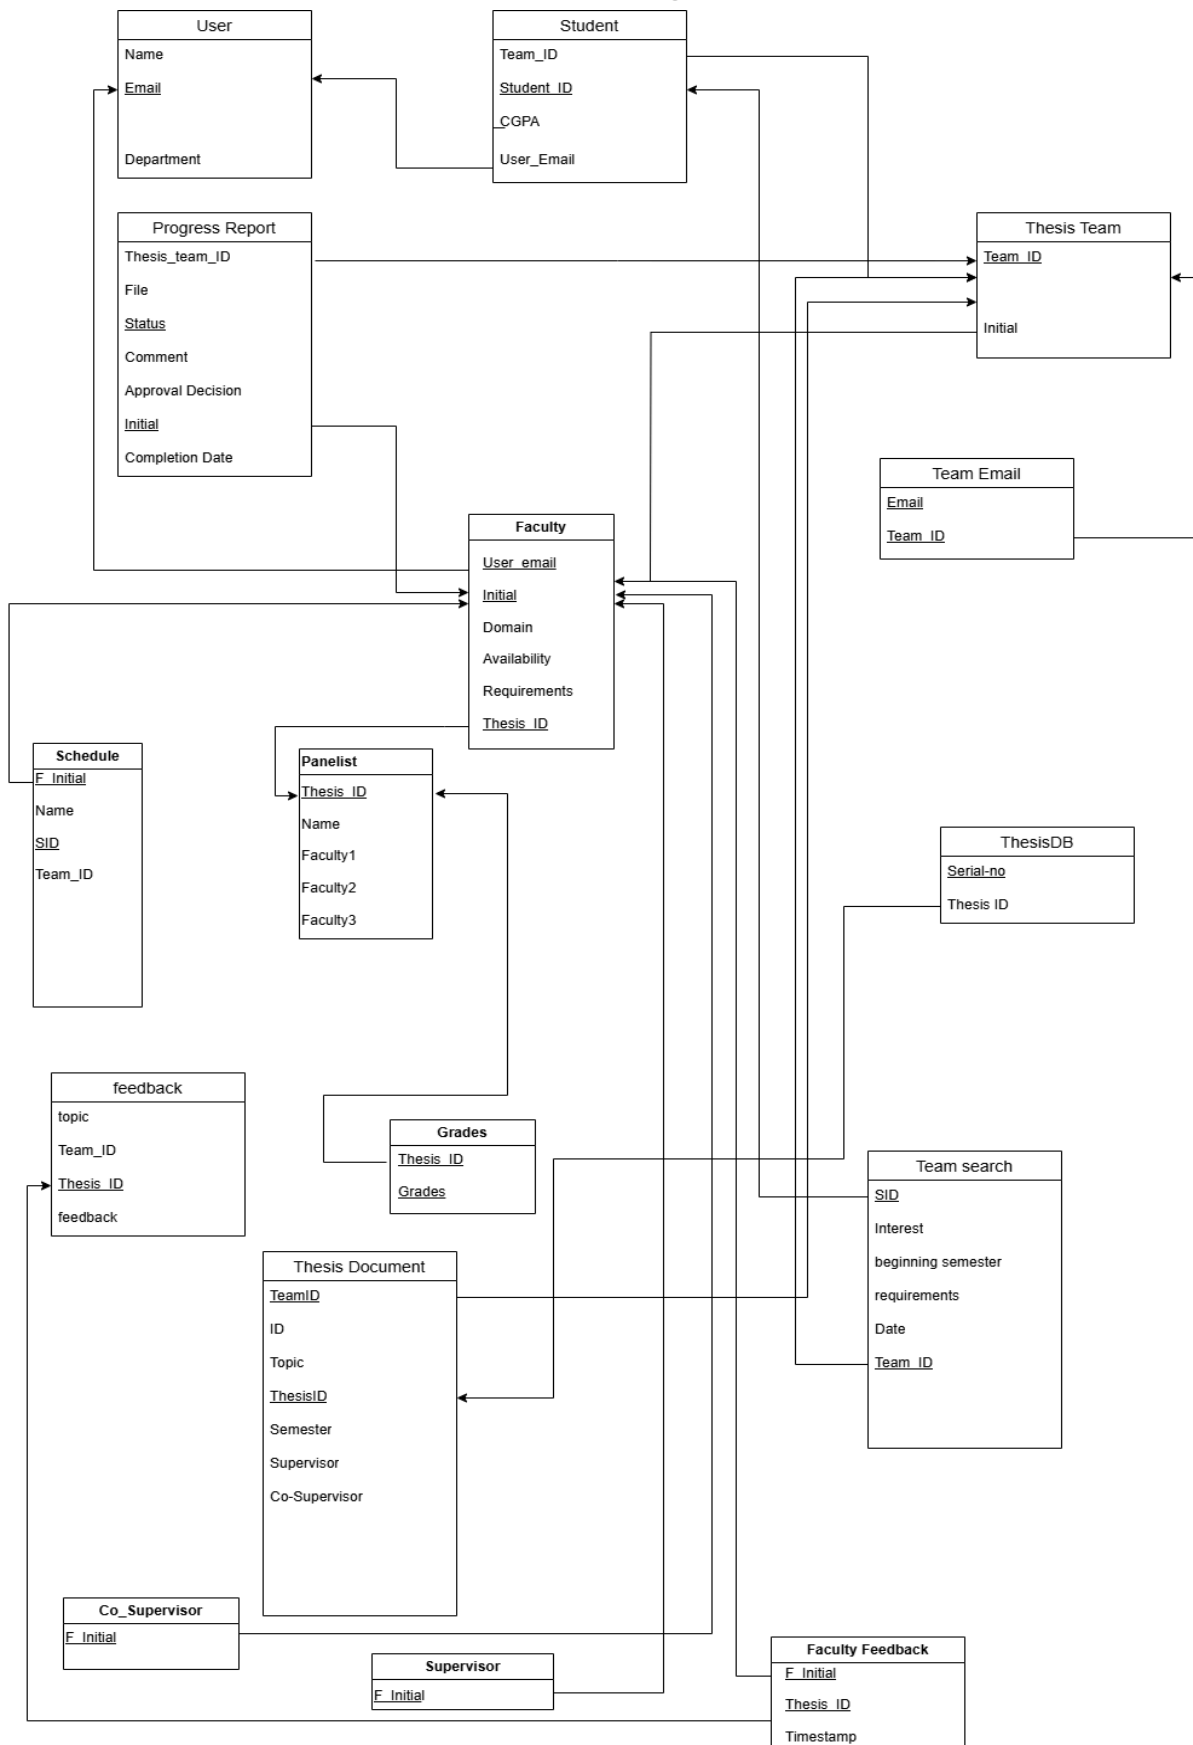

A database where all the submitted final thesis are stored

Frontend Development

Contribution of ID : 22201441, Name : Shahriar Khan Shirso

1. Designed and coded the Student Dashboard layout.
2. Created frontend for Submit Thesis, Feedback, Grade, Progress report, Schedule, Thesis database, Thesis registration pages using **HTML and CSS**

Contribution of ID : 22201064, Name : Samiha Farhan

1. Designed the main theme and overall style of the frontend including colors, layout and sidebar structure.
2. Designed the Faculty Dashboard layout.
3. Created frontend for Supervisor/Co-supervisor list, Apply as Supervisor/Co-supervisor, Team Search using **HTML and CSS**
4. Helped with styling the sidebar.
5. Ensured proper linking between menus and pages.

Backend Development

Contribution of ID : 22201441, Name : Shahriar Khan Shirso

1. **Schedule Management (Student & Faculty)**
Implemented scheduling functionality for both students and faculty.
Designed the "**Schedule Meeting**" button, allowing users to create and manage meeting schedules. Implemented functionality to allow the faculty to accept/reject the meeting.
2. **Thesis Team Registration**
Developed the "**Register Team**" button and related logic for students without an

existing team. Enables users to register their team after meeting a supervisor.

3. Team Details Viewing

Enabled students and faculty to view team information: **Students** access it via the "**View Details**" button. **Faculty** access it through the "**Team ID**" interface.

4. Thesis Submission and Download

Integrated buttons and logic allowing: Students to submit their thesis documents and faculty to view and download submitted theses from their dashboard.

5. Thesis Database Integration

Contributed to the design and functionality of the **Thesis DB** system.

Ensured proper storage of approved theses following validation processes. Enabled users to **view and download** admissible theses from the database.

Contribution of ID : 22201064, Name : Samiha Farhan

1. Supervisor and Co-supervisor Listing

Developed functionality to display available supervisors and co-supervisors. Ensured that relevant faculty details are shown to help students choose suitable mentors.

2. Team Search for Individual Students

Implemented the **team search feature** for single students without a team.

Allows students to view open teams and request to join based on available team data.

3. Apply as Supervisor/Co-supervisor

Created a system that enables faculty members to apply as supervisors or co-supervisors. Ensured proper connection with the thesis team database.

Contribution of ID : 22201689, Name : Abrar Fahim

1. Feedback Handling

Designed and implemented the feedback feature, allowing faculties to **provide** feedback. Ensured proper storage of feedback in the system.

2. Progress Report

Designed progress report feature where students can submit regular updates about their thesis progress, which supervisors can download.

3. Database Design

Designed the core database structure for the thesis management system using **phpMyAdmin** . Defined table relationships, constraints and ensured normalization for data consistency and efficiency.

4. System Integration

Merged all individual team members' features into a unified, fully functional system. Handled conflict resolution and ensured smooth operation across all modules.

5. Fixing Bugs

Identified and fixed all major and minor bugs across the website to ensure smooth functionality and user experience.

Contribution of ID : 22299028, Name : Nuzhat Tahsin

- 1. Acquire Panellist:** Implemented acquire panellist feature so that students can choose desired panelist according to their interest. Additionally, the faculty dashboard will include these panelists as supervisors.
- 2. Schema diagram**

Conclusion

The **Thesis Management System** was created to make the thesis process easier and more organized for both students and faculty. This system allows users to handle team registration, assign supervisors, manage schedules, give feedback, submit documents and track thesis progress.

Our team used **HTML and CSS** to build a simple and user-friendly interface. The database was designed using **phpMyAdmin** to store and manage all data. Key features such as thesis registration, supervisor listings, team search, meeting scheduling and document handling were built with the needs of both students and faculty in mind. Faculty members can easily view and download submitted theses, while students can check their team status and receive feedback.

One team member handled the main database and combined everyone's work into one smooth system. Others built and styled the frontend, added new features and ensured the whole system worked well from start to finish.

In short, this project shows how proper teamwork, planning and design can solve real problems in academic settings.
